HTOON Synthetic Therapy

-Basic Model Presentation-

Integral holistic approach in
HTOON Synthetic Therapy
complementary medicine
process management

A brief orientation

Dr. Herman Fridsma, Ph.D. Co2007

I give thanks to Ineke van Meurs and Nadine de Haseth who inspired me at spiritual level to write this document that is focused at orientation level of therapy related management on the by myself developed HTOON Synthetic Therapy.

Preface

This document about HTOON Synthetic Therapy is written as a integral holistic approach in HTOON Synthetic Therapy complementary medicine process management from out of a brief orientation so one can orientate oneself on the basic impact of the complexity of the HTOON-ST model and systematic. The integrated system is developed by myself based on my own philosophy, research and experiments as a professional within the field of complementary medicine.

Dr. Herman Fridsma, Ph.D.

HTOON Synthetic Therapy

Integral holistic approach in HTOON Synthetic Therapy complementary medicine process management, a brief orientation.

Introduction:

(1) HTOON Synthetic Therapy model 1) general information:

The HTOON-ST model represents a overall open system and forms a multi functional therapy practice related instrument for client case connected management. The HTOON Synthetic Therapy forms a macro methodology practice centered therapeutic process management basic model. The model displays professional field centered structure and therapeutic dimension in relation to the integrated processes. The model forms a roadmap for connected professionals and it provides structure and insight in relation to the operational field of profession. The functional HTOON Synthetic Therapy model displays a elementary complementary medical qualitative effect and result centered encounter process management diagram from out of the relation therapist, transpersonal psychology and naturopathy (including: homeopathy, orthomolecular medicine, oligotherapy protocols and methods). The model represents a complementary structural medical methodology integration, (HTOON Synthetic Therapy), in relation to the biological human individual, stress related energetic unbalance, pathological illness development, effect and HTOON Synthetic Therapy process evaluation etc. Input level A of the HTOON Synthetic Therapy model represents the help question of the individual to the therapist in relation to manifest problems. Input level B of the model represents the Integral and differential HTOON Synthetic Therapy effect and result evaluation and process control feedback processing related to X and or Y in model 1, (see HTOON Synthetic Therapy model 1 supplemental part 3). Output level A of the model represents the external reference (external specialist reference). Output level B of the model represents the energetic balance column in relation to normative health. The figures 1, 2, 3, 4, 5, represents the mean individual therapy systems which can be used single or integral in relation to manifest client centered problems: 1) Homeopathy, 2) Transpersonal Therapy, 3) Oligotherapy, 4) Orthomolecular therapy and 5) Naturopathy. The Synthetic Therapy segments 1 to 5 may be used at integral level in relation to holistic therapy analyses and evaluation and or at differential level in relation to individual therapy segment analyses and evaluation which need to result in to sub process therapy feedback data to improve HTOON Synthetic Therapy effectiveness in relation to therapy trough put processing. Special notes 1 and 2 displays ad 1) the supplemental diagram related to oligotherapy and ad 2) the external laboratory research path in relation to oligotherapy and metabolic blockades related to the client. Special notes 3 displays the profile of the professional HTOON Synthetic Therapy therapist and the qualification demands. The model is developed and tested in the therapeutic setting of the practice and modified by: Dr. Herman Fridsma, Ph.D., HTOON Synthetic Therapy model system developer and project initiator.

(2) HTOON-ST primary goals:

The HTOON-ST model has three mean goals. (1) To serve as a tool and quick functional practical refer diagram for the professional complementary medical qualified therapist or physician to manage the therapeutic input, through put and output processes and the related process feedback and control from out of a client centered point of few. (2) To serve as a instrument for training and education to show participants the significant impact of therapeutic integrated systems and processes and to show how to control these processes from out of HTOON-ST related system management. (3) To serve as a practical client education tool for therapy related information purposes.

(3) HTOON-ST necessity:

From out of therapeutic management control in a complex complementary medicine environment and multi disciplinary therapy goals in relation to the client it is necessary to work with effective therapy related management tools so Dr. Herman Fridsma, Ph.D. developed a practical and functional effective and easy to use multi disciplinary practice related HTOON-ST model to fulfill this need to gain process related knowledge and control in relation to therapy processes so one can gain insight into complex multi disciplinary therapy system related structures and processes. It is important within the therapeutic process to gain client related knowledge as well as system related knowledge, that is why the HTOON-ST model and system is important as a multi functional diagram and therapeutic process indicated management tool to gain a overall vision and insight in relation to the therapy process with all process related ins and outs.

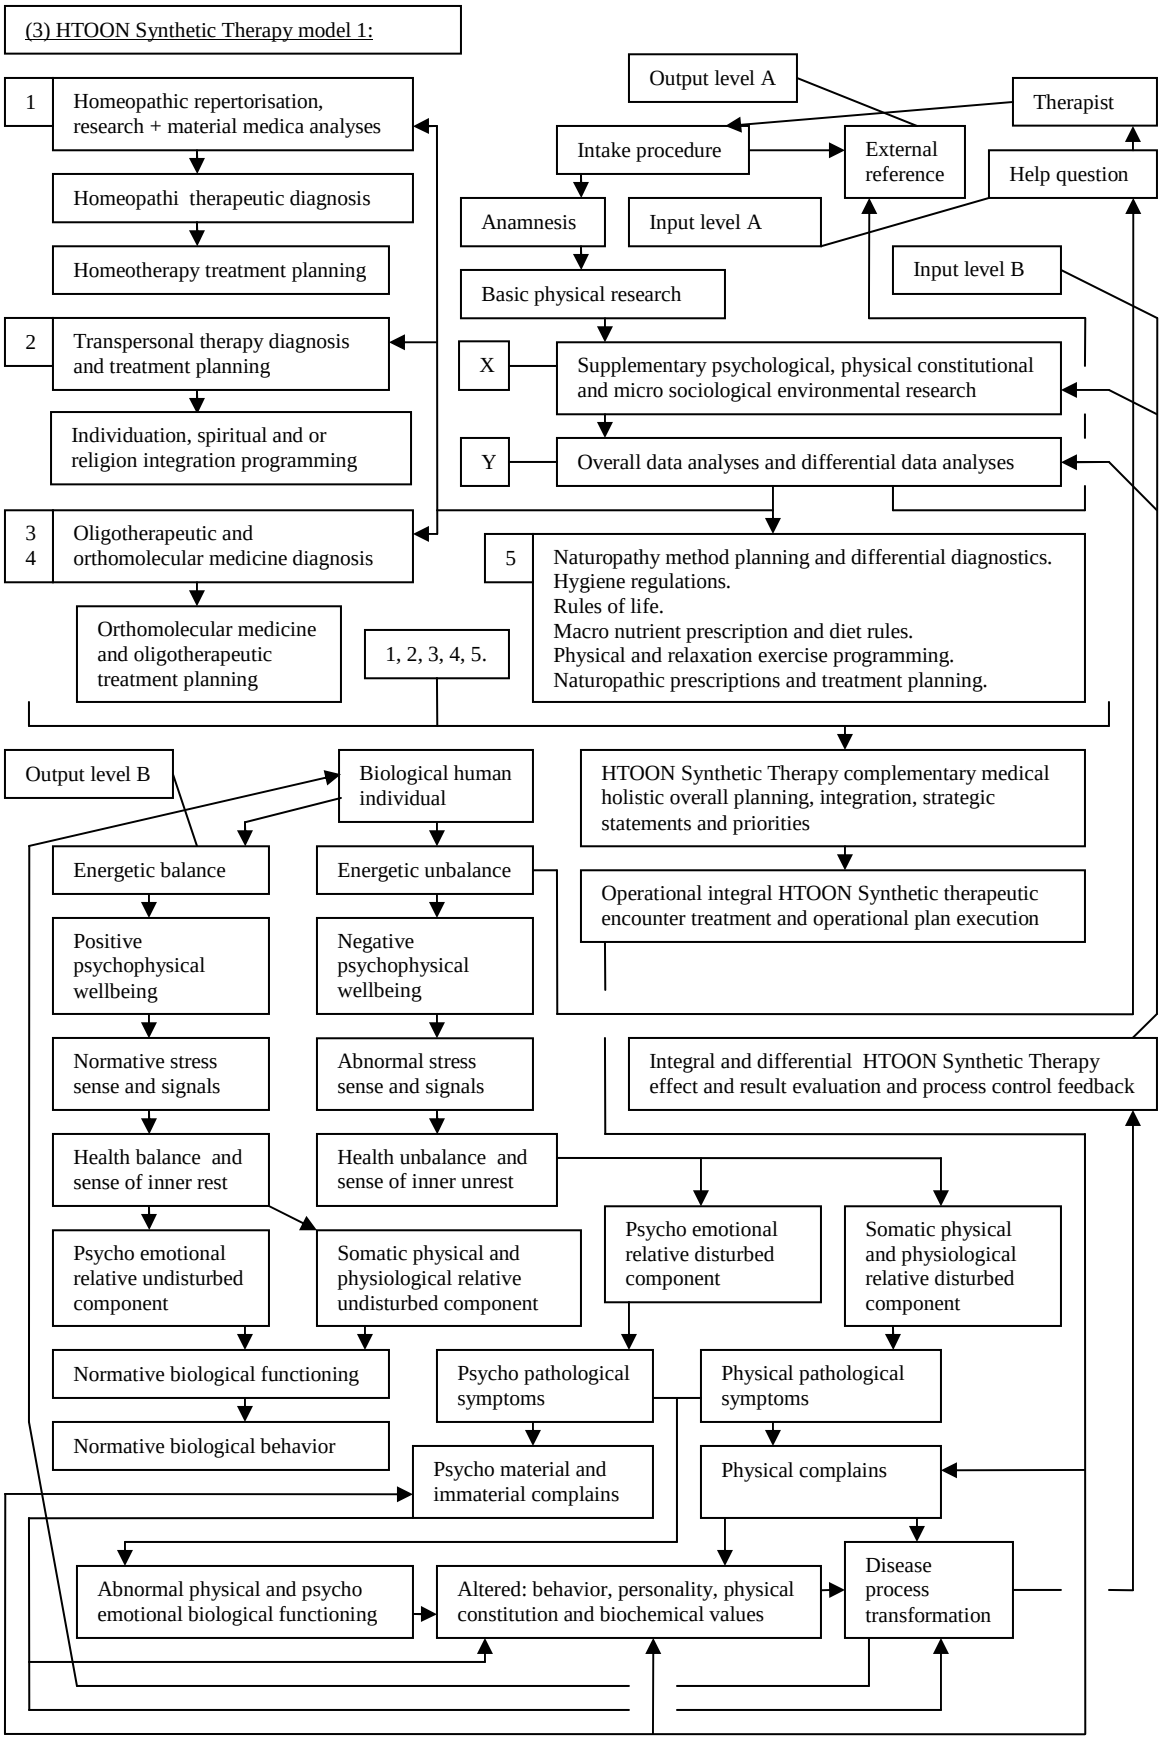
Findings:
(1) General key notes:
The THOON-ST system delivers update direct real time management information when used as a therapeutic integrated instrumental tool. The HTOON-ST system demands professional qualified and skilled therapists and physicians on HTOON-ST level to understand the systems implications and to work effectively and efficient within the system and the integrated disciplines of homeopathy, transpersonal psychology and therapy, oligotherapy, orthomolecular medicine and naturopathy. The HTOON-ST let the professional gain strategic-, strategic-tactical-, tactical-, tactical-operational-, and operational insight and vision into complex therapeutic procedures and integrated related processes. The HTOON-ST model forms a relative easy to use practical and functional overall basic management tool to manage therapeutic processes within the manifest disciplinary field of profession and from out of the relation of the therapist or physician with the client on professional level. HTOON-ST increased the HTOON-ST professionals capability to gain control over therapy sub processes without loosing insight in complex HTOON-ST connected procedures and protocols. Professionals can work easy with the HTOON-ST model because of the direct interaction with their own professional disciplines. The professional can in relation to the HTOON-ST model led clients see how the therapeutic system and related processes connected to the client self works from out of a client information purpose to inform the client and to provide the client of insight in its own process of development in relation to the therapeutic process of the HTOON-ST related therapeutic disciplines. This develops a interaction of trust between therapist or physician and the client. The step of the professional to give the client therapy related insight provides the client with vision so the client can see were the client stands within the process. (Practical client centered education). HTOON-ST makes clients easy to understand the meaning of the integrated HTOON-ST therapy in relation to expectations of the client so clients will be more connected to the therapy they are connected with and they are more motivated and consistent in their behavior to complete the therapy and to stay under therapeutic regime and regulations. This process of understanding is of great importantly for the client because one understands the meaning and the purpose of the therapy and the therapeutic system and its complex implications translated to a practical level by the therapist or physician and connected to the clients intelligence of understanding at conscious level. This interaction stimulates the learning process and learning ability of the client.

The HTOON-ST system is been developed, tested and modified from out of the practice of DR. Herman Fridsma, Ph.D. at NMG in Amsterdam in the Netherlands and discussed with professional colleagues from other disciplines within the field of complementary medicine with positive result. The HTOON-ST model is a theoretical and practical integrated open concept for the professional participant to come to a process of understanding the nature of the therapeutic system and systematic and to participate on real time level directly operational active within the HTOON-ST system as a confident and respectful professional who can manage at direct and indirect action level complex processes and who can interact effectively within the system and next to the client and its complex problems at physical and psycho emotional level. HTOON-ST professionals will take initiatives. They takes control in therapeutic client centered input and output processes. The professional is one who initiates therapy processes and integrate process related knowledge from out of a process of understanding in relation to positive centered practice and case related results and transformation interactions. The professional is one who guide the client from out of therapeutic interventions to the final task and goal of client centered individuation and constitutional physical and psycho emotional balance. The experience from out of the NMG practice in the field of complementary medicine shows us that client and therapist in general act positive and with confidence from out of the HTOON Synthetic Therapy approach with effective integral holistic therapy results also in complex pathologic somatic, psycho somatic and psycho emotional cases. The HTOON Synthetic Therapy system and model is developed as a open therapeutic management system and model so professionals can form their own opinion and gain knowledge from out of the therapeutic system by case related research. The HTOON Synthetic Therapy system stimulates system and therapy related follow up research in relation to the integrated therapy disciplines and in relation to the therapy related client centered cases.

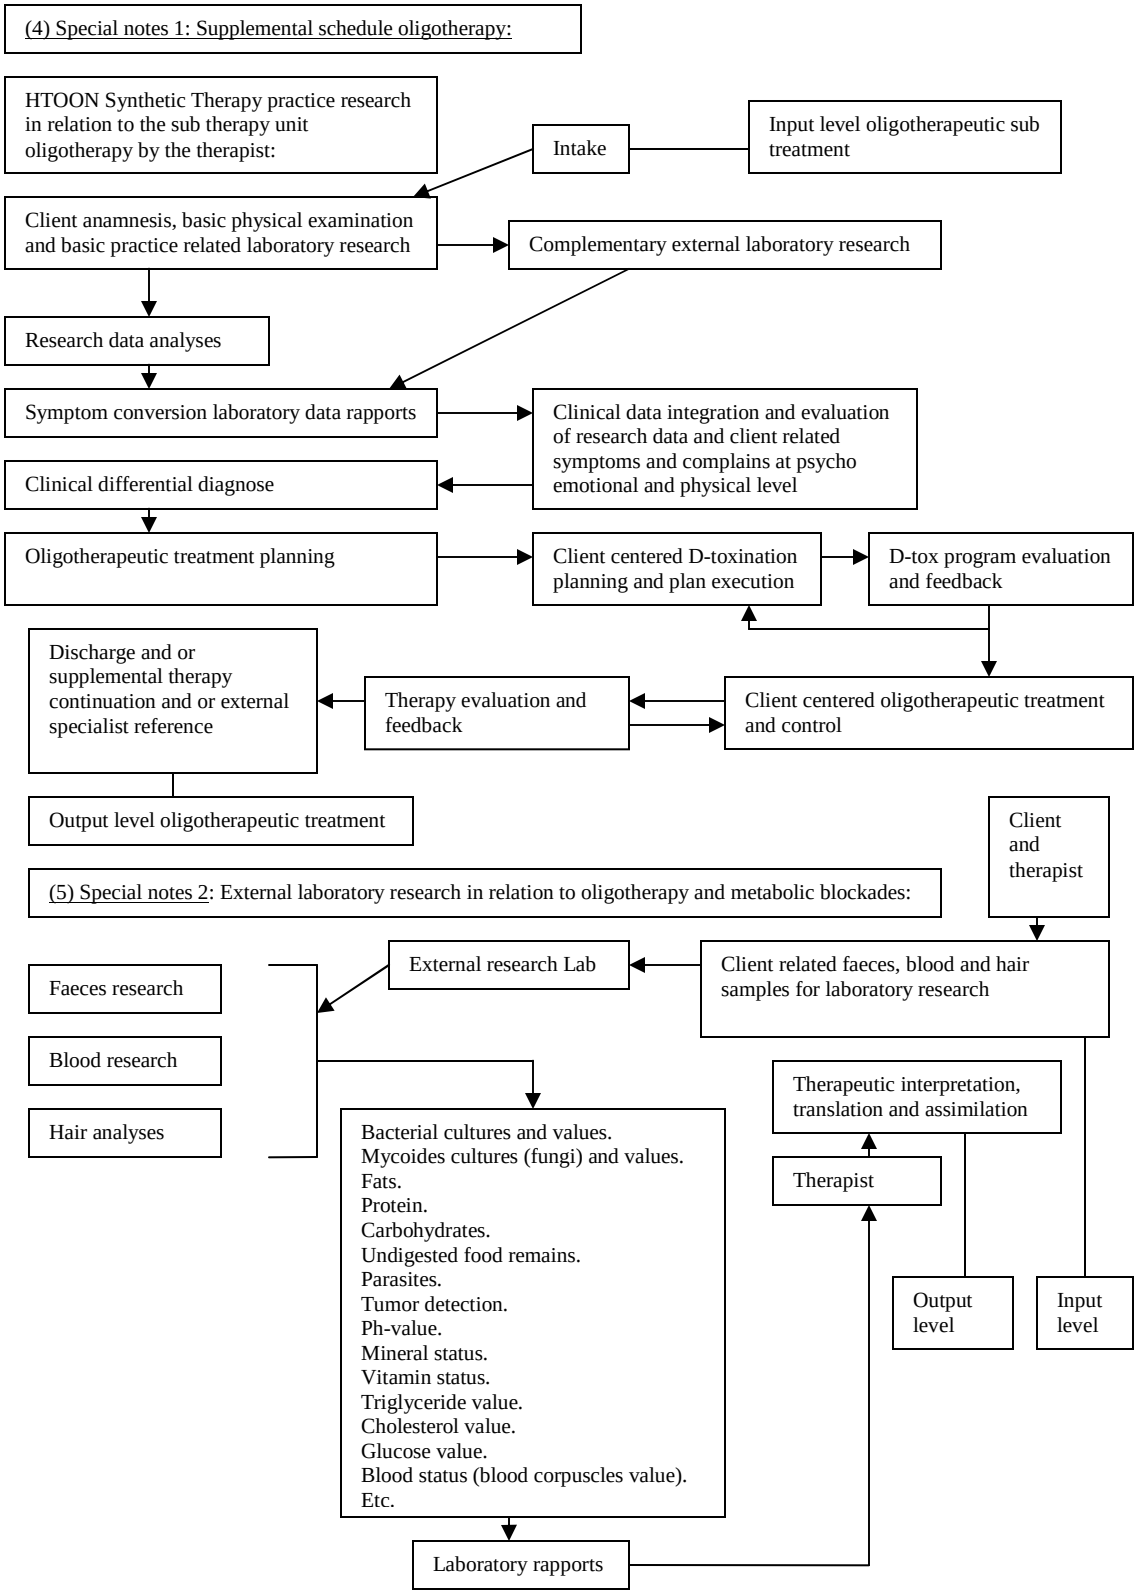
(2) Reference chart for HTOON Synthetic Therapy model 1 supplemental part 3:

H.T.O.O.N. Synthetic Therapy model, (abr. HTOON-ST), is a model for HTOON Synthetic Therapy management.
HTOON-ST stands for: 1) Homeo-, 2) Transpersonal-, 3) Oligo-, 4) Orthomolecular-, 5) Naturopathic- Synthetic Therapy.

1	Ad1) Classical homeopathy approach for physical and psycho mental constitutional or miasmata recovery and clinical homeopathy approach for clinical ailment or miasmata recovery from out of the homeopathic system of diagnostics and a holistic complementary medical management approach in relation to homeopathic therapy, materia medica research and therapeutics. (Minimum dose).
2	Ad 2) Transpersonal psychotherapy and analytical therapy research focused on client centered individuation, spiritual and or religion integration by transpersonal methodological treatment.
3	Ad 3) Diagnostic pathological research from out of the point of few of oligo therapeutics to restore metabolic health problems in relation to metabolic recovery by countering metabolic blockades on biochemical level by means of oligo elements. (Minimum dose).
4	Ad 4) Micro nutrimental orthomolecular therapy from out of orthomolecular medicine focused on pathologic diagnostics research to restore health problems by micro nutrient food supplementation (vitamins, minerals, enzymes, amino acids, organ extracts, probiotics, etc.). (Mega dose).
5	Ad 5) Naturopathic methods, rules and protocols to restore health problems after pathological diagnostics and basic physical examination, also used to counter or prevent illness by increasing the physical defense mechanisms of the human body by natural means. (Phytotherapeutics, orthomolecular therapeutics, homeotherapeutics, diets, physical exercises, light therapy, electro therapy, water therapy, massage etc.).



(3) HTOON Synthetic Therapy model 1:
1
Homeopathic repertorisation, research + material medica analyses
Homeopathi therapeutic diagnosis
Homeotherapy treatment planning
2
Transpersonal therapy diagnosis and treatment planning
Individuation, spiritual and or religion integration programming
3
4
Oligotherapeutic and orthomolecular medicine diagnosis
Orthomolecular medicine and oligotherapeutic treatment planning
Output level A
Therapist
Intake procedure
External reference
Help question
Anamnesis
Input level A
Input level B
Basic physical research
X
Supplementary psychological, physical constitutional and micro sociological environmental research
Y
Overall data analyses and differential data analyses
5
Naturopathy method planning and differential diagnostics.
Hygiene regulations.
Rules of life.
Macro nutrient prescription and diet rules.
Physical and relaxation exercise programming.
Naturopathic prescriptions and treatment planning.
1, 2, 3, 4, 5.
Output level B
Biological human individual
HTOON Synthetic Therapy complementary medical holistic overall planning, integration, strategic statements and priorities
Energetic balance
Energetic unbalance
Operational integral HTOON Synthetic therapeutic encounter treatment and operational plan execution
Positive psychophysical wellbeing
Negative psychophysical wellbeing
Normative stress sense and signals
Abnormal stress sense and signals
Integral and differential HTOON Synthetic Therapy effect and result evaluation and process control feedback
Health balance and sense of inner rest
Health unbalance and sense of inner unrest
Psycho emotional relative undisturbed component
Somatic physical and physiological relative undisturbed component
Psycho emotional relative disturbed component
Somatic physical and physiological relative disturbed component
Normative biological functioning
Psycho pathological symptoms
Physical pathological symptoms
Normative biological behavior
Psycho material and immaterial complains
Physical complains
Abnormal physical and psycho emotional biological functioning
Altered: behavior, personality, physical constitution and biochemical values
Disease process transformation



(4) Special notes 1: Supplemental schedule oligotherapy:
HTOON Synthetic Therapy practice research in relation to the sub therapy unit oligotherapy by the therapist:
Intake
Input level oligotherapeutic sub treatment
Client anamnesis, basic physical examination and basic practice related laboratory research
Complementary external laboratory research
Research data analyses
Symptom conversion laboratory data rapports
Clinical data integration and evaluation of research data and client related symptoms and complains at psycho emotional and physical level
Clinical differential diagnose
Oligotherapeutic treatment planning
Client centered D-toxination planning and plan execution
D-tox program evaluation and feedback
Discharge and or supplemental therapy continuation and or external specialist reference
Therapy evaluation and feedback
Client centered oligotherapeutic treatment and control
Output level oligotherapeutic treatment
Client and therapist
(5) Special notes 2: External laboratory research in relation to oligotherapy and metabolic blockades:
External research Lab
Client related faeces, blood and hair samples for laboratory research
Faeces research
Blood research
Hair analyses
Therapeutic interpretation, translation and assimilation
Therapist
Bacterial cultures and values.
Mycoides cultures (fungi) and values.
Fats.
Protein.
Carbohydrates.
Undigested food remains.
Parasites.
Tumor detection.
Ph-value.
Mineral status.
Vitamin status.
Triglyceride value.
Cholesterol value.
Glucose value.
Blood status (blood corpuscles value).
Etc.
Output level
Input level
Laboratory rapports

(6) Special notes 3 supplemental: Profile of the professional HTOON Synthetic Therapy therapist

(6.1) Basic profile keynotes for professionals:

(6.2) HTOON Synthetic Therapy therapist qualifications:

HTOON Synthetic Therapy is specially designed and remodeled for medical doctors and therapists with a license related to the complementary medicine disciplines of:

-Homeopathy.
-Transpersonal Therapy.
-Oligotherapy.
-Orthomolecular medicine.
-Naturopathy.

(6.3) Study qualification demands for professionals:

One need to be examined in all above mentioned disciplines at college or university level and pass the examinations and one need also to have a pass examination qualification for the basic medical disciplines anatomy, physiology and pathology at least at college level.

(6.4) Qualification conclusion concerning professionals:

The qualification setting for the HTOON-ST therapist or physician stands in relation to quality and professional skills and behavior of the professional so one can operate within the healthcare and a complementary medical practice to perform client related professional therapeutic tasks from out of a instrumental multi disciplinary methodology from out of the related fields of the integral therapeutic profession.

Discussion:

In today world complementary medicine stands under direct structural pressure of conservative regular (traditional) physicians and related professional health organizations, political lobbies and the regular pharmaceutical industry next to a conservative healthcare policy of the government (in most countries) and because of the regular protected medical monopoly position to protect their markets and financial money interest. This unscientific and prejudice united forces from out of the traditional regular medical sector within society has as one of the basic complains against complementary medicine under this conditions that complementary medicine related physicians and therapists have no professional qualified professional academic background and training and that their complementary therapeutic methods are unscientific and a fraud for the traditional conservative medical world and profession and is dangerous for public health and so on. That is why complementary medicine disciplines need to profile them self to a higher level of quality by scientific research, quality protocols etc. The HTOON Synthetic Therapy model displayed at structural level the integrity and validity of the integrated HTOON-ST disciplines in relation to the complementary medicine therapist or physician and their clients and the therapeutic processes and client related field and scientific research in relation to curative, preventive and or palliative level of therapeutic interventions to increase the clients health level from out of the centered HTOON-ST methodology disciplines. The public healthcare is better off when regular and complementary medical health professionals will cooperate for the benefit of mankind. Statistically there is a relative stable and growing health market for complementary medicine and if regular and complementary professionals will cooperate one can learn from each other for the benefit of the medical profession because the client or patient with physical and or psycho emotional health problems needs to be the centre point of interest. As contribution to the discussion to stimulate the discussion on complementary medicine level and healthcare I will set four basic key questions.

(1) Does the HTOON Synthetic Therapy system and model can be of benefit as a complementary part within the complementary medicine ?
(2) Will the present system of integrated HTOON Synthetic Therapy model and system related disciplines be effective for clients ?
(3) Delivers the HTOON Synthetic Therapy system and model from out of the integrated multi disciplinary approach surplus value for clients ?
(4) Do you think HTOON synthetic Therapy related therapists and physicians will be professionally skilled and equipped to fulfill their therapeutic task ?

Summary:

Abstract- The HTOON Synthetic Therapy model and system developed by Dr. Herman Fridsma, Ph.D. displays a structural effective and efficient input, output and through put therapeutic management system for therapeutic HTOON Synthetic Therapy purpose. Therapists and physicians who work and will work with the multi disciplinary integrated system of HTOON-ST as an effective structural taskforce within the field of complementary medicine will embed the holistic wholeness in therapeutic influence from out of the system in relation to oneself and the client. The model gives insight into therapeutic processes and process stadium and also in the professional relation between the therapist and the client. The HTOON-ST model shows direct active HTOON-ST processes at real time level next to client centered processes in relation to individual health and pathologic related transformations in relation to therapy feedback, process control and development. The HTOON-ST system asks for qualified professionals to operate from within. The HTOON-ST model and system forms a open holistic multi disciplinary approach for professionals and can act as a therapy process related guideline for professional and for educational purposes.

Conclusion:

The HTOON Synthetic Therapy model represents a trustworthy, substantial and proved system and will be of benefit for HTOON-ST related therapists and physicians who want to use the system as a structural basic guide line into their own practice and for further research and study. As a reference diagram for practical and functional purpose and used into the practice of the HTOON-ST therapist or physician, the HTOON-ST model will fulfill its role and function as a therapeutic related management instrument and provides process related information at multi disciplinary level and for multi task purposes and goals. The HTOON-ST model can also be used for client education and for professional training, orientation, education and analyze purpose and goals to gain insight in to the complexity of therapeutic processes at therapeutic management level from out of the multi disciplinary holistic integrated HTOON-ST methodology. We live in a information and active communication society so that effective management and management process information is valuable for professionals especially within complementary medicine to operate trustworthy and effective and efficient in relation to clients and society. The HTOON-ST model provides therapy process related information and is valuable for the HTOON-ST therapist and physician so they can perform their task within the system. The HTOON-ST model and system is proofed and functional and can be integrated for multiple purposes into the modern practice of a HTOON-ST qualified therapist or physician.
